Communities need to recycle

Everybody knows that recycling is a magnificent idea. If we don't recycle all the plants will die because of all the rubbish. Our environment is getting worse and worse every day because of all that horrible rubbish.

If we recycle the world will be a better place. When you recycle you reuse plastic, cans, paper and many other things. Just think about it, our homes would be clean our plants will be healthy and we would breath in fresh air not polluted air. We also wouldn't be living under piles of rubbish. Is it really worth killing our planet and nature and ourselves?

Only a fool would have to believe that it is a pathetic idea not to recycle. You can also stop all of our native trees from being cut down also some of the animal's habitats are in those trees that are being cut down. Would you like to lose your house? How would you feel?

I hope you agree to make our world a better place everyone needs to recycle to save the plants and our environment.

Remember about how clean your houses would be if you recycle.
