

Recycling In Our Community.

Who wouldn't want to recycle? Recycling is the best way to keep the earth healthy. Recycling is re-using things to make other objects with that material. We all must recycle!

Firstly it helps us because if we recycle paper less trees are cut down to make it. We all need trees to breathe. It's a proven fact.

Recycling also helps animals. If we don't recycle rubbish will build up and wash into the sea. Turtles will mistake plastic bags for jellyfish and suffocate!

In addition the pollution in the air will be horrible! It will ruin the water. Research shows only 3% of the Earth's water is fresh! Do you really want to have to drink salt water?

Therefore recycling helps the earth, animals and us. Without it the earth would be nothing! Now think, why wouldn't you recycle?
