

# Communities need to recycle

It is important for communities to recycle. Recycling is reusing your old products, which makes our environment eco-friendly. We must recycle so there is not rubbish in and around our local parks, beaches and schools.

Firstly, communities should recycle because we need to keep our local environment protected for future generations. Recycling saves resources such as trees. When we recycle paper we put less carbon dioxide in the atmosphere and more trees are saved.

In addition, an average Australian household disposes of at least 3 kilograms of rubbish every day! More and more rubbish is being produced but recycling reduces the amount of rubbish going to landfill.

Lastly, recycling saves energy and money. Buying second hand goods such as clothes means that we don't use the resources needed to make new goods. So please RECYCLE. It will protect our future!

In conclusion, I have stated that if we recycle we will have clean water, clean air and a clean earth. If we recycle we will have resources for the future. If the whole community takes part there will be less rubbish.
